

Principles of Optimisation

Lehrstuhl für Bauprozessmanagement und Immobilienentwicklung
Univ.-Prof. Dr.-Ing. Josef Zimmermann

Principles of Optimisation

Index of contents

- Chapter 1 Introduction to Optimisation Methods
- Chapter 2 Optimising Complex Systems
- Chapter 3 Linear Optimisation - Simplex Method
- Chapter 4 Non-linear Optimisation
- Chapter 5 Deterministic Simulation

Chapter 1: Introduction to Optimisation Methods

Index

1	Introduction	1-1
1.1	Real Situations and (Mathematical) Models	1-1
1.1.1	Abstraction	1-1
1.1.2	Algorithms	1-1
1.1.3	Interpretation	1-2
1.2	Theory of Systems	1-2
1.2.1	Elements of a System	1-2
1.2.2	Principles of Systems Theory	1-3
1.3	Planning	1-5
1.4	Consideo Tool	1-6
1.4.1	Descriptive model	1-6
1.4.2	Creative Model	1-7
1.4.3	Qualitative model	1-8
1.4.4	Quantitative Model	1-10
1.4.4.1	Equations: factor and level	1-10
1.5	Assignment: Factor Analysis	1-11
1.5.1	Project “Factors Station U-Bahn Münchner Freiheit”	1-12
1.5.2	Developing single-family homes	1-12

Chapter 2: Optimising Complex Systems

Index

2	Optimising Complex Systems	2-1
2.1	Formulation of the Optimising Problem	2-1
2.2	Optimisation by differentiation	2-2
2.2.1	Direct elaboration of extrema	2-2
2.2.2	Extrema defined by simple border conditions	2-4
2.2.3	Lagrange-Multipliers:	2-5
2.3	Assignments	2-8
2.3.1	Coupling fuzzy durations	2-8
2.3.1.1	Introduction	2-8
2.3.1.2	Task and proposed proceeding	2-10
2.3.2	Risk Management	2-12
2.3.2.1	Introduction	2-12
2.3.2.2	Assignment and proposed proceeding	2-12

Chapter 3: Linear Optimisation – Simplex Method

Index

3	Linear Optimisation – Simplex Method	3-1
3.1	Introduction	3-1
3.2	Presentation of a model for illustration	3-1
3.3	Graphical solution (Two-dimensional)	3-2
3.3.1	Variables	3-2
3.3.2	Visualisation of border conditions	3-2
3.3.3	Visualisation of vector to be optimized	3-3
3.4	General form of linear problems	3-4
3.4.1	Variables	3-4
3.4.2	Target Function	3-4
3.4.3	Border Conditions	3-5
3.4.4	Fundamental Description of the Situation	3-5
3.5	Simplexalgorithm	3-6
3.5.1	Analytical Proceeding	3-6
3.5.2	Initial Situation to Start With	3-7
3.5.3	Modification Step from one Vertex to another Vertex	3-8
3.6	Specific Algorithm	3-10
3.6.1	Obtaining a random starting solution	3-10
3.6.2	Criterion of Optimality	3-11
3.6.3	Optimisation step	3-11
3.6.4	Termination of procedure	3-12
3.6.5	Evaluation of the result	3-13
3.6.6	Starting procedure	3-13
3.7	Summary: Tableau	3-14
3.8	Examples and Assignments	3-17

3.8.1	Assignment 1	3-17
3.8.2	Assignment 2	3-18

Chapter 4: Non-linear Optimisation

Index

4	Non-linear Optimisation	4-1
4.1	Geometrical Approach for Nonlinear Situations	4-1
4.1.1	Nonlinear Situations for Illustration	4-1
4.1.2	Problems	4-2
4.1.3	Some specific nonlinear situations	4-3
4.2	Linearisation/Separable Optimisation	4-4
4.2.1	Extension Method	4-4
4.2.2	General Approach: Linearising functions	4-5
4.2.3	Linearisation of boundary conditions (BC)	4-6
4.2.4	Linearisation of target functions	4-6
4.3	Assignment: Non-linear Optimisation/Linearisation	4-7

Chapter 5: Search Methods and Deterministic Simulation

Index

5	Search Methods and Deterministic Simulation	5-1
5.1	Iterative Linearisation	5-1
5.2	BlackBox-Method (Approximation)	5-2
5.2.1	Principles	5-2
5.2.2	Approximation for Product Terms	5-2
5.2.3	Example Black Box Method	5-2
5.3	Search Methods	5-3
5.3.1	General Proceeding	5-4
5.3.2	Boundary conditions	5-4
5.3.3	„Rubber walls“	5-4
5.3.4	Example: Search Methods with Rubber Walls	5-5
5.3.5	Gradient method	5-6
5.3.6	Simulated Annealing	5-7
5.4	Optimisation of Non-linear and Non-analytic Problems	5-7
5.4.1	Examples of Complex Systems	5-7
5.4.2	Information from network-plan structure	5-9
5.4.3	Algorithm of Ford	5-9
5.5	Deterministic Simulation	5-12
5.5.1	The Addressed Problem: Non-resolvable structures	5-13
5.5.2	Analytical example: Non-solvable function	5-14
5.6	Assignment - Simulation of a Production Site	5-17
5.6.1	Capital	5-18
5.6.2	Personnel	5-18
5.6.3	Material	5-18
5.6.4	Rate of Sales	5-19
5.6.5	Remark	5-20
