Master's Thesis für den Studiengang Bauingenieurwesen

The impact of the built environment on employee productivity (Die Auswirkungen der gebauten Umwelt auf die Mitarbeiterproduktivität)

One of the fundamental human requirements is a working environment that allows people to perform their work optimally under comfortable conditions. The purpose of this project is to identify the effect of the level of comfort on the productivity of people working in office environments.

Expectation:

- Literature review on the key physical work environment indicators.
- Qualitative and Quantitative analysis on the impact of the physical work environment on employee productivity using survey data.

Suggested Literature:

Paul Kegel (2017) The impact of the physical work environment on organization outcomes: a structure review of the literature. Journal of Facility Management Education and Research.
